

## **ISS network specialist – part time (on-call duties required)**

The hospital is looking for a part time Information Services & Support network specialist.

The ISS Network Administrator will be responsible for ECH ISS projects and daily support issues. The ISS network specialist will perform troubleshooting and remediation on problems related to operating systems, LOB applications, servers, workstations, peripherals and network related hardware and software. The ISS Network Administrator will also be responsible for coordinating services and repair of the various telecommunications systems within the hospital (phone, voice-mail, pagers).

The ISS network specialist will work with staff, offering assistance and providing tutelage and support for the variety of software applications in operation.

Requirements include, but not limited to:

- Bachelor's Degree in Information Technology/Computer Science or equivalent work experience with technical certifications.
- Minimum of two years of experience implementing, managing, and troubleshooting computer network environments.
- Experience managing wireless networks, PACS radiological technology, Symantec 5640 Gateway for firewall, Windows, IP/non-IP telephone systems, etc.
- Ability to write programs and scripts using Visual Basic, VB Script, Windows Management Instrumentation (WMI), Active Directory Services Interface (ADSI), and Windows Scripting Host (WSH).
- Good interpersonal and communication skills; ability to operate and communicate effectively and independently under stressful conditions.
- Highly motivated self-starter.
- Ability to read, write, comprehend and translate technical documentation.
- Detail oriented with prioritization skills required.

Competitive salary and benefit package.
